The New Paganini Cello Plant

Every cellist dream's of being able to locate the cello on the floor securely, firmly and without vibration! The New Paganini Plant makes this dream more of a reality. It gives the cellist freedom to concentrate solely on playing. It sits firmly on any surface whether parquet, stone, or carpeted flooring. Its low, flat shape means the end of cello spike is so close to the floor that it can't topple over, even on soft or yielding floors. Thereby the cellist feels it is secure. The New Paganini Plants 's good design and high level of functionality is totally convincing. It will become an indispensable accessory for every cellist.

Even under extreme conditions, it provides a secure grip with its anti-slip matting of reinforced high tear-resistant special fibres. The New Paganini Plant is made of high-grade stainless steel. The Socket is made of highly wear and tear resistant plastic for the noiseless and firm holding of the Cello Endpin Spike, which is usually made of metal.

To keep the unit in good condition, all you need to do is to wash the Anti slip matting in warm water with a bit of hand soap, then carefully dry with a lint free paper towel. This unit even works on Glass!!!
